

Sea Snake Antivenom

Consumer Medicine Information (CMI) summary

The [full CMI](#) on the next page has more details. If you are worried about using this medicine, speak to your doctor or pharmacist.

1. Why am I using Sea Snake Antivenom?

Sea Snake Antivenom contains the active ingredient sea snake antivenom (equine). Sea Snake Antivenom is given to people who become ill from venom after being bitten by a sea snake.

For more information, see Section [1. Why am I using \[medicine name\]?](#) in the full CMI.

2. What should I know before being given Sea Snake Antivenom?

Talk to your doctor if you have any other medical conditions, take any other medicines, or are pregnant or plan to become pregnant or are breastfeeding.

For more information, see Section [2. What should I know before I use Sea Snake Antivenom?](#) in the full CMI.

3. What if I am taking other medicines?

Some medicines may interfere with Sea Snake Antivenom and affect how it works.

A list of these medicines is in Section [3. What if I am taking other medicines?](#) in the full CMI.

4. How is Sea Snake Antivenom given?

- The dose for both adults and children is one vial (1,000 units). The dose can be repeated as necessary.

More instructions can be found in Section [4. How is Sea Snake Antivenom given?](#) in the full CMI.

5. What should I know while being given Sea Snake Antivenom?

Things you should do	<ul style="list-style-type: none">• Tell your doctor if you experience any side effects.
-----------------------------	--

For more information, see Section [5. What should I know while being given Sea Snake Antivenom?](#) in the full CMI.

6. Are there any side effects?

Common side effects may include: allergic reactions, headache, rash, hives, fever and chills.

Tell your doctor immediately if you notice any of the following:

- sudden signs of allergy such as rash, itching or hives on the skin, swelling of the face, lips, tongue or other parts of the body, shortness of breath, wheezing or trouble breathing
- rapid, shallow breathing, cold, clammy skin, a rapid, weak pulse, dizziness, weakness and fainting
- pinkish, itchy swellings on the skin, also called hives or nettle rash
- fever, swelling, skin rash, joint pains and swelling of the glands in the neck, armpit or groin, anytime up to two weeks after the injection.
- chest pain.
- high temperature.

For more information, including what to do if you have any side effects, see Section [6. Are there any side effects?](#) in the full CMI.

Sea Snake Antivenom

Active ingredient: *sea snake antivenom (equine)*

Consumer Medicine Information (CMI)

This leaflet provides important information about using Sea Snake Antivenom. **You should also speak to your doctor or pharmacist if you would like further information or if you have any concerns or questions about using Sea Snake Antivenom.**

Where to find information in this leaflet:

- [1. Why am I using Sea Snake Antivenom?](#)
- [2. What should I know before being given Sea Snake Antivenom ?](#)
- [3. What if I am taking other medicines?](#)
- [4. How is Sea Snake Antivenom given?](#)
- [5. What should I know while being given Sea Snake Antivenom?](#)
- [6. Are there any side effects?](#)
- [7. Product details](#)

1. Why am I using Sea Snake Antivenom?

Sea snake Antivenom contains the active ingredient **sea snake antivenom (equine)**. Sea Snake Antivenom is an injection designed to help neutralise the effect of the poison (venom) of the sea snake.

Sea Snake Antivenom is given to people who become ill after being bitten by sea snake. Not everyone who is bitten needs the antivenom, as some people have only very mild effects from the bite or none at all. However, some people can become very ill after being bitten, and in these people, it may be important to use an appropriate amount of antivenom to counteract the effects of the venom.

2. What should I know before being given Sea Snake Antivenom?

Warnings

Sea Snake Antivenom should not be given if:

- You do not have any ill effects from the sea snake bite.

Always check the ingredients to make sure you can use this medicine.

Check with your doctor if you:

- Have allergies to any other medicines or any other substances such as foods, preservatives or dyes
- have any other medical conditions especially the following: asthma, hayfever,
- take any medicines for any other condition.

- received injections containing horse serum (including snake bite and other antivenoms, and anti-tetanus injections before 1974)
- received injection of Sea Snake Antivenom.

During treatment, you may be at risk of developing certain side effects. It is important you understand these risks and how to monitor for them. See additional information under Section [6. Are there any side effects?](#)

Pregnancy and breastfeeding

Check with your doctor if you are pregnant or intend to become pregnant.

Talk to your doctor if you are breastfeeding or intend to breastfeed.

3. What if I am taking other medicines?

Tell your doctor or pharmacist if you are taking any other medicines, including any medicines, vitamins or supplements that you buy without a prescription from your pharmacy, supermarket or health food shop.

Check with your doctor or pharmacist if you are not sure about what medicines, vitamins or supplements you are taking and if these affect Sea Snake Antivenom.

4. How is Sea Snake Antivenom given?

How much is given

The dose for both adults and children is one vial (1,000 units). The dose can be repeated as necessary.

Your doctor will take precautions to counteract any allergic reactions if they should happen.

When is Sea Snake Antivenom given

- Sea Snake Antivenom should be only given to those people who become ill after being bitten by a sea snake.

How is Sea Snake Antivenom given

This medicine is diluted and given slowly as a drip into a vein.

Once diluted Sea Snake Antivenom should be used immediately. Diluted antivenom should not be stored.

Sea Snake Antivenom does not contain any antimicrobial preservative. It should be used once, and any residue discarded.

5. What should I know while being given Sea Snake Antivenom?

When medicines are produced in animals and injected into you, it is always possible that viruses or other substances could be present in the medicine and cause an illness. These could be viruses or other infectious agents which may not yet have been discovered. In the past, there have been no reports of this ever having happened with this product.

If you have any queries about any aspect of this medicine, or questions regarding information in this leaflet, discuss them with your doctor or pharmacist.

6. Are there any side effects?

All medicines can have side effects. If you do experience any side effects, most of them are minor and temporary. However, some side effects may need medical attention.

As the injection is made from horse serum, side effects occur more commonly in those who have allergies, particularly if they have ever had injections before which were also prepared in horses. Allergic reactions can be treated by your doctor.

See the information below and, if you need to, ask your doctor or pharmacist if you have any further questions about side effects.

Less serious side effects

Less serious side effects	What to do
<ul style="list-style-type: none"> local reaction around the injection site such as redness, tenderness, pain or discomfort, warmth, burning or stinging, swelling or the formation of hard lumps or scars chills aching muscles, muscle tenderness or weakness, not caused by exercise stomach pain or discomfort headache nausea, vomiting and diarrhoea. <p>These side effects are usually mild.</p>	<p>Speak to your doctor if you have any of these less serious side effects and they worry you.</p>

Serious side effects

Serious side effects	What to do
<ul style="list-style-type: none"> sudden signs of allergy such as rash, itching or hives on the skin, swelling of the face, lips, tongue or other parts of the body, shortness of breath, wheezing or trouble breathing, 	<p>Call your doctor straight away, or go straight to the Emergency Department at your nearest</p>

<ul style="list-style-type: none"> rapid, shallow breathing, cold, clammy skin, a rapid, weak pulse, dizziness, weakness and fainting pinkish, itchy swellings on the skin, also called hives or nettle rash fever, swelling, skin rash, joint pains and swelling of the glands in the neck, armpit or groin, anytime up to two weeks after the injection chest pain high temperature. 	<p>hospital if you notice any of these serious side effects.</p>
