## 1. Why am I using Furosemide – Baxter?

---

Furosemide - Baxter contains the active ingredient **Furosemide**. Furosemide - Baxter is a diuretic. A diuretic helps reduce the amount of excess fluid in the body by increasing the amount of urine produced.

**Furosemide – Baxter is used to treat swelling of the ankles, feet, legs or even the brain or lungs. This swelling is called edema and can occur in some heart, lung, liver or kidney conditions.**

**Furosemide– Baxter may be used in some patients with more serious kidney problems who may have some fluid retention.**

Furosemide – Baxter may be given alone or in combination with other medicines to treat your condition.

Your doctor may have prescribed Furosemide – Baxter for another purpose.

Ask your doctor if you have any questions about why it has been prescribed for you.

This medicine is only available with a doctor's prescription.

This medicine is not addictive.

---

## 2. What should I know before I use Furosemide – Baxter?

---

### Warnings

**Do not use Furosemide – Baxter if:**

- certain liver and kidney problems
- no production or no passing of urine
- low blood pressure (hypotension)
- low sodium levels in your blood
- low potassium levels in your blood
