## 1. Why am I using Pharmacor Mycophenolate?

---

**Pharmacor Mycophenolate contains the active ingredient mycophenolate mofetil.**

Pharmacor Mycophenolate belongs to a group of medicines called immunosuppressants.

Immunosuppressants are used to prevent the rejection of a transplanted organ and work by stopping your immune system from reacting to the transplanted organ.

There are many different types of medicines used to prevent rejection of a transplanted organ.

Pharmacor Mycophenolate may be used together with other medicines known as cyclosporin and corticosteroids

**Ask your doctor if you have any questions about why this medicine has been prescribed for you.**

Your doctor may have prescribed it for another reason.

Pharmacor Mycophenolate is not addictive.

This medicine is available only with a doctor's prescription.
