

FENEZINE

Promethazine hydrochloride (PRO-meth-ar-zine HIGH-dro (h)-CLOR-ride)

Consumer Medicine Information

Why am I using Fenezine?

Fenezine contains the active ingredient promethazine hydrochloride.

Fenezine is an antihistamine used to treat a number of conditions:

- allergies - allergic contact dermatitis, hives, hayfever, bites and stings
- respiratory symptoms due to allergies - runny nose
- nausea and vomiting - motion sickness
- assists in the management of the symptoms of chicken pox and measles by acting as a sedative
- for short-term use for sedation on the advice of a pharmacist or doctor – do not use for more than 7-10 days

Antihistamines help reduce allergic symptoms by preventing the effects of a substance called histamine. Histamine is produced by the body in response to foreign substances that the body is allergic to.

Your pharmacist or doctor may have recommended Fenezine for another reason.

Ask your pharmacist or doctor if you have any questions about the medicine.
