## 1. Why am I using Bufomix Easyhaler?

---

**Bufomix Easyhaler contains two active ingredients, budesonide and formoterol (as formoterol fumarate dihydrate).**

- Budesonide is a corticosteroid which reduces swelling and irritation in the lungs.
- Formoterol belongs to a group of medicines called 'long acting beta-2 agonists' or 'bronchodilators'.  
Bronchodilators help the airways in the lungs to stay open. This makes it easier for air to get in and out to help you

breathe more easily. The effects last for up to 12 hours

**Bufomix Easyhaler is used to help prevent breathing problems such as:**

- Asthma
- Chronic Obstructive Pulmonary Disease (COPD)

Bufomix Easyhaler can be used by some people with asthma to treat the symptoms when their asthma gets worse and to prevent asthma attacks or symptoms from happening.

Bufomix Easyhaler also helps to prevent breathlessness and wheeziness in people who need regular treatment.
