1. Why am I using TANILONE?

TANILONE fatty ointment contains the active ingredient methylprednisolone aceponate, a corticosteroid suitable to put on the skin.

TANILONE is used to relieve the redness, swelling, itching and irritation of the skin in eczema and psoriasis.

Eczema is a skin condition with redness, swelling, oozing of fluid, crusting and later scaling. It is often very itchy.

Psoriasis is a skin disorder with raised, rough, reddened areas covered with dry, fine, silvery scales.

Ask your doctor if you have any questions about why TANILONE fatty ointment has been prescribed for you.

Your doctor may have prescribed it for another reason.

This medicine is not addictive.
