

CIPLA BISOPROLOL

Active ingredient(s): *Bisoprolol fumarate*

Consumer Medicine Information

This leaflet provides important information about using CIPLA BISOPROLOL. **You should also speak to your doctor or pharmacist if you would like further information or if you have any concerns or questions about using CIPLA BISOPROLOL.**

Where to find information in this leaflet:

1. Why am I using CIPLA BISOPROLOL?
2. What should I know before I use CIPLA BISOPROLOL?
3. What if I am taking other medicines?
4. How do I use CIPLA BISOPROLOL?
5. What should I know while using CIPLA BISOPROLOL?
6. Are there any side effects?
7. Product details

Heart failure occurs when the heart muscle is weak and unable to pump enough blood to supply the body's needs. Heart failure may start off with no symptoms, but as the condition progresses patients may feel short of breath and notice swelling of the feet and ankles due to fluid build up.

CIPLA BISOPROLOL also slows your heart rate, which in turn increases the efficiency of your heart.

CIPLA BISOPROLOL can help to reduce the number of heart failure episodes needing hospital admission and also the risk of sudden death.

Your doctor may have prescribed CIPLA BISOPROLOL for another reason. Ask your doctor if you have any questions about why CIPLA BISOPROLOL has been prescribed for you.

1. Why am I using CIPLA BISOPROLOL?

CIPLA BISOPROLOL contains the active ingredient bisoprolol fumarate. CIPLA BISOPROLOL belongs to a group of medicines called beta-blockers. These medicines work by affecting the body's response to some nerve impulses, especially in the heart. As a result, it decreases the heart's need for blood and oxygen and therefore reduces the amount of work the heart has to do.

CIPLA BISOPROLOL is used to treat heart failure. It is usually used in combination with other medicines.
