

Zyamis

Active ingredient(s): midazolam

Consumer Medicine Information

This leaflet provides important information about using ZYAMIS.

You should also speak to the patient's doctor or pharmacist if you would like further information or if you have any concerns or questions about using ZYAMIS for the patient.

Where to find information in this leaflet:

1. Why is the patient using ZYAMIS?

2. What you or your patient should know before using ZYAMIS

3. What if the patient is taking other medicines?

4. How to use ZYAMIS?

5. What should you know while using ZYAMIS?

6. Are there any side effects?

7. Product details

1. Why is the patient using ZYAMIS?

ZYAMIS contains the active ingredient midazolam (as maleate). ZYAMIS belongs to a group of medicines known as benzodiazepines.

ZYAMIS is used to stop generalised convulsive seizures ('fit') in patients over 6 months old. ZYAMIS must only be used by parents/caregivers where the patient has an established diagnosis of epilepsy by a medical practitioner.

2. What you or your patient should know before using ZYAMIS

Warnings

Do not use ZYAMIS if the patient:

1. is allergic to midazolam, or any of the ingredients listed at the end of this leaflet.
2. has severe muscle weakness, also known as myasthenia gravis.
3. has a condition called acute narrow angle glaucoma
4. is suffering from shock, or in a coma or have had a large amount of alcohol or
5. is using disulfiram.

Always check the ingredients to make sure the patient can take this medicine.
